## Looking at the Year Ahead

With Daniel Giamario and Cayelin K Castell

The background of the slide features a dark space scene. On the left, the planet Saturn is shown with its characteristic rings, tilted diagonally. To the right, the planet Uranus is visible as a smaller, blue-tinted sphere. The text is overlaid on this background in a large, white, bold font with a slight drop shadow.

# Is this the Star of Bethlehem Returning?

Some astronomers speculate the Jupiter Saturn Conjunction that occurred three times in 7 BCE

May 29 at 21 Pisces

October 01 at 17 Pisces

Dec 05 at 16 Pisces was the star of Bethlehem.

Other researchers feel the triple conjunction of Venus and Jupiter that occurred in

3 BC - August 12 at 25 Cancer

2 BC - June 17 at 8 Leo and August 24 at 22 Leo

with a mutual occultation (meaning one planet covered the other similar to an eclipse) between Jupiter and Venus on June 18, 2 BCE was the more likely Star of Bethlehem.

What is so remarkable about this Jupiter Saturn conjunction is how close it is.

Plus it is visible and it is happening on the December Solstice when the Sun is on the Galactic Cross!

December Solstice 21, 2020 with such a close & visible Jupiter Saturn conjunction is a once in 26,000 year event.

## All Planets Moving Forward

**January 14, 2021** (Uranus goes direct) to **January 30, 2021** (when Mercury goes Retrograde) or 16 days of all planets moving forward covering the Presidential Inauguration on January 20.

**On February 20** Mercury stations direct creating 66 more days of all planets moving forward until Pluto stations retrograde on **April 27**.

This is a total of 82 days in 2021. This extra 66 days is a rare recurrence that doesn't happen again until 2025 when we will again have two time frames with all the planets moving forward.
