What is Uranus?

- Uranus is a planet (4 times larger than Earth) that orbits between Saturn and Neptune
- Uranus was “discovered” in 1781 – However, every year when in opposition with the Sun, it can be visible with the naked eye
- It takes Uranus 84 years to complete one orbit of the Sun
- It’s the only planet that rotates on its side

Uranus in Shamanic Astrology

Like the other “outer planets”, Uranus is an initiator, teacher and guide in Shamanic Astrology

Uranus in Taurus - Area of Sign

What is the Nature of Uranus' Ingress into Taurus?

- A Shift in how we experience the arts, beauty, comforts and pleasures in life
- Revolutionary ideas and experiences around convenience and being present with ourselves
- Breakthroughs in how Sensuality and Intimacy are intended in our respective cultures
- What is the Nature of “The Good Life” and/or “Feeling Good” as expressed through Taurus?
- Emerging technologies and innovations associated with Taurus like “Virtual Reality”

May 15, 2018 - Uranus Ingressed into Taurus on the same day as Mars ingressed into Aquarius

The Aquarius-Taurus “polarity” or relationship is one of the Mind vs Body

Aquarius and Uranus have an intimate resonance with two major qualities akin to Prometheus and the Sky God Uranus

Mars is in the sign of Aquarius for several months in 2018 and this astrological square is a theme of 2018 and the next couple of years due to the nature of the Mars Synodic Cycle

A possible scenario is the split between the masculine Aquarian mind merging with technology (a vision of the “Technocrats” and all others embracing the body and its intimate connection to nature, Earth)

Virtual Reality could take leaps and bounds during this time as a tool for humanity
